Backend Engineer – Intern

Location

On-Site (Bengaluru, India)

Internship Duration

6 months (Performance-based PPO)

About FlexyPe

FlexyPe is a technology company transforming the **eCommerce checkout experience** for direct-to-consumer (D2C) brands. We build a **one-click, seamless checkout platform** that helps merchants increase conversions, reduce cart abandonment, and improve revenue.

Our product focuses on solving real checkout problems such as payment failures, friction-heavy forms, and high RTO rates. FlexyPe offers features like **OTP-based login, pre-filled addresses, smart couponing, AI-driven upsells, and optimized payment flows**, designed especially for fast-growing markets like India.

Founded in **2023** by **Azeem Hussain** (Co-Founder and CEO - LPU alumni 2020) and **Bishwajyoti Roy** (Co-Founder and CTO - LPU alumni 2021), we're headquartered in **Bengaluru**.

FlexyPe is trusted by **500+ D2C brands** - we operate with a small, fast-moving team where engineers take **end-to-end ownership** of systems and work on real production challenges at scale.

About the Role

We are looking for **Backend Engineer Interns** who are passionate about building scalable systems and learning real-world backend engineering. This internship is designed for **freshers or final-year students**, with a **full-time PPO opportunity** based on performance.

You'll work closely with experienced engineers, contribute to production systems, and gain hands-on experience with cloud-native backend architectures.

Responsibilities

- Design, develop, and maintain backend services and APIs

- Work with databases like **MongoDB and PostgreSQL**
- Write clean, maintainable, and well-tested code
- Build and integrate services using **Node.js and Python**
- Work with AWS infrastructure with different AWS services understanding
- Debug issues, optimize performance, and improve system reliability
- Collaborate with frontend, DevOps, and product teams
- Participate in code reviews and technical discussions

Tech Stack

Core:

- Node.JS
- MongoDB
- PostgreSQL
- Python
- AWS

Good to Have:

- Golang
- Docker / Containers
- Basic understanding of system design
- Linux fundamentals

Who Should Apply

- Fresh graduates or final-year students in CS / IT or related fields
- Strong fundamentals in **data structures, APIs, and databases**
- Comfortable with at least one backend language (Node.js or Python preferred)
- Willingness to learn cloud infrastructure and distributed systems
- Good problem-solving and communication skills

Stipend & Compensation

- **Internship Stipend:** ₹20,000 / month
- **PPO (Full-Time Offer):** ₹6 - 10 LPA (based on performance during internship)

What You'll Gain

- Real production-level backend engineering experience
- Hands-on exposure to cloud-native and scalable system design
- Mentorship and guidance from founding engineers, working with founders directly
- Opportunity to convert internship into a **full-time role**
- Fast growth in a high-ownership environment - learning leadership
